Ankara Summit Delivers Defense
Pacts, Patriot License Raises More
Questions Than Answers, China
Unveils 100GW Microwave Weapon

Defense Brief

July 12, 2026

The Bottom Line

A consequential day for defense industry and military technology. The Ankara NATO summit generated over \$50 billion in procurement commitments — from the Saab GlobalEye selection to \$40 billion in counter-drone spending — but the alliance's most important deliverable, the Patriot license for Ukraine, will take years to translate into interceptors on the front line. China's public disclosure of a 100GW microwave weapon was a deliberate strategic signal about its anti-satellite and electronic warfare ambitions. Ukraine's drone forces demonstrated unprecedented naval reach by hitting 21 Russian tankers and forcing the closure of the Don-Azov Channel, while institutionalizing their campaign under a new Long-Range Impact Command. India's commissioning of its sixth indigenous frigate in 18 months illustrates that defense indigenization is no longer aspirational — it's operational. The pattern across all these developments is the same: the gap between strategic ambition and industrial reality remains the binding constraint.
